The subject matter which applicants regard as their invention is particularly pointed out and distinctly claimed as follows:

We Claim:

1. A composition comprising:

a) At least one compound (A) selected from the group consisting of silcone elastomers and a compound having the formula (I):

(I)

SUB-

A composition as defined in claim 1 additionally containing a free

Action areas viscos areas, areas, resistante de seguin action for the seguing and seguing and seguing action actio

- radical initiator selected from the group consisting of organic peroxides and azo initiators.
- 3. A composition comprising a composition as defined in Claim 2 and a polymer curable by free radical initiators.
- 4. A process comprising forming the composition of Claim 3 into a shaped article and then subjecting it in the presence of molecular oxygen to a temperature sufficient to initiate decomposition of the free radical initiator and thereby obtaining a cured shaped article substantially free of surface tack.
- 5. A composition formed by mixing compounds (A) and (B) as defined in claim one.
- A composition formed by mixing compounds (A) and (B) as defined in claim 1 and an organic peroxide in any order.
 A composition as defined in claim/1 wherein compound (A) is
- selected from bismaleimides and Compound (B) is selected from sulfur accelerators.
- 8. A composition as defined in claim 1 wherein compound (A) is selected from biscitraconimides and compound (B) is selected from sulfur accelerators.
- 9. A composition as defined in claim 1 wherein compound (A) is selected from bismaleimides and compound (B) is selected from polysulfide polymers.
- A composition as/defined/in claim 1 wherein compound (A) is selected from biscitraconimides and compound (B) is selected from polysulfide polymers.
- 11. A composition as defined in claim 1 wherein compound (A) is selected from silicone elastomers and compound (B) is selected from polysulfide polymers.
- 12. A composition as defined in claim 1 also comprising a compound selected from the group consisting of chlorinated polyethylene and chlorosulfonated polyethylene.
- 13. A composition as defined in claim 2 wherein the free radical initiator is selected from organic peroxides.
- 14. A surface tack ffee cured polymer cured in the presence of

molecular oxygen by free radicals generated by decomposition of the free radical initiator in a composition as defined in claim 3.

- A process for making a surface tack free cured polymer cured by 15. free radicals generated by decomposition of a free radical initiator contained therein in the presence of molecular oxygen which comprises compounding said polymer with a composition as defined in claim 2 and supplying sufficient heat energy to decompose the free radical initiator thus introduced into the polymer.
- A process for making a curable composition capable of being cured 16. to a tack free surface in the presence of molecular oxygen by a free radical initiator which process comprises compounding a polymer capable of being crosslinked by a free radical initiator with a composition as defined/in claim 2.
- A process for making a curable composition capable of being cured 17. to a tack free surface in the presence of molecular oxygen by a free radical initiator which comprises compounding a polymer capable of being crosslinked by a free radical initiator containing a composition as defined in claim 1 in the presence of a free radical initiator.
- A composition as defined in claim 1 wherein compound (A) is 18. selected from one or more bismaleimides and compound (B) is selected from the group consisting of dialkylthiuram tetrasulfides, diarylthiuram tetrasulfides, alkylphenol disulfides, tetraalkylthiuram monosulfides, tetraarylthiuram monosulfides and mixtures thereof.
- A composition as defined in claim 2 wherein the free radical 19. initiator is selected from dialkyl peroxides or peroxyketals.
- A composition as defined in claim 18 additionally containing a free 20. radical initiator selected from dialkyl peroxides or peroxyketals.
- A composition as defined in claim 1 wherein compound (A) is 21. selected from one or more bismaleimides and compound (B) is selected from the group consisting of 4,4-dithiomorpholine, acyclicalkyl-2-benzothiazole sulfenamides, cyclicalky-2-

- benzothiazole sulfenamides, aryl-2-benzothiazole sulfenamides, alkylphenol disulfides and mixtures thereof.
- 22. A composition as defined in claim 21 additionally containing a free radical initiator selected from dialkyl peroxides, or peroxyketals.
- 23. A composition as defined in claim 2 comprising dicumylperoxide, N,N-phenylenebismaleimide, 4,4dithiomorpholine, alkylphenoldisulfide and N-cyclohexyl-2-benzothiazole sulfenamide.
- 24. A composition as defined in claim 2 comprising dicumylperoxide, N,N-phenylenebismaleimide, dipentamethylene thiuram tetrasulfide, alkylphenoldisulfide and tetramethylthiuram monosulfide.
 - A composition as defined in claim 2 comprising dicumyl peroxide, N,N-phenyleneb smaleimide, dipentamethylenethiuram tetrasulfide, alkylphenol disulfide and N-t-butyl-benzothiazole-2-sulfenimide.
- 26. A composition as defined in claim 1 formulated as a masterbatch on a carrier selected from the group consisting of microcrystalline wax, polycaprolactone, EPDM, EPM, EVA, PE and mixtures thereof.
- 27. A composition as defined in claim 2 formulated as a masterbatch on a carrier selected from microcrystalline wax, polycaprolactone, EPDM,/EPM, EVA, PE and mixtures thereof.
